

Assignment - 1\* Sample Business Requirement Documents Template.Problem name:

Integrated child Development Services (ICDS) is a government program in India that provides nutrition, preschool education, primary health care, immunization, health screening and referred services to children under the age of 6 and their mothers. But in village kindergarten faces challenges during this program problem like missmanagement are arises due to not having proper schedule for it so that's why to overcome this problem & helping them we develop app which help them for managing things in easier way.

Executive Summary snapshot:

Government of India provide infant feeding in all over India. In rural areas, infant feeding distribution plays a crucial role in ensuring that infants receive proper nutrition for their growth and development. The government often provides programs and initiatives to distribute essential nutrients and food supplements to infants in these area. These programs aim to address malnutrition and promote healthy growth among infants by providing them with the necessary nutrients they may lack in their regular diet. By distributing these food supplements, the government help improve the overall health and well being of infant in rural communities.

The vaccination program done by the government plays a crucial role. Government vaccination programs are typically designed to provide essential vaccines to prevent various diseases, protect public health, & create herd immunity within communities.

These programs often target specific age groups, such as infants children & adults to ensure comprehensive immunization

Coverage. Free health camps and health check-up programs are conducted in many village and rural areas for helping poor and needy peoples.

### Project description:-

- If we create the app, things can reach easily to the people like the day on which nutritional diet distribution is going to be done, the message will be delivered to the people 2,3 days before with the help of this app. Day, date, time are mentioned in it or daywise schedule is posted on the app for avoiding crowd problem.
- Also the message will be sent to the people 2,3 days before the day of vaccination so that the children will not miss the dose & they will get the dose on time.  
for that, you will need to register first in the app. Two options are given their nutritional diet and vaccination you can choose and register their.
- for registration for nutritional diet program you can register their Name of child, Parents Name, Age of child, Birth date of child and Adhaar no of parents & Mobile No of parents.
- for registration for vaccination program you can register their Name of child, Parents Name, Age of child, Birth date and Mobile No of parents & your permanent address is also needed.
- If anyone has any health related problem, they can also consult a specialist doctor through the app.
- By using this app, the government can monitor the feeding programs vaccination schedules more effectively, leading to better healthcare for infants in village kindergartens.
- Reminder is also present in this app.

## Project scope:-

### Project special goals:

These app aim to promote the health and well-being of infants by ensuring they receive proper nutrition through timely feeding and essential vaccinations to protect them from preventable diseases.

### Task:

We will first have an app and have all the features which we want to include in it.

### Cost:

The budget for developing an infant feeding and vaccination app can vary depending on various factors such as the app's features, complexity, design, platform and the development team's rates. The budget for developing an infant feeding and vaccination app can range from a few thousand rupees to tens of thousands of rupees.

### Deadlines:

We need time to make this project so we need to set deadline. We have to make this project within 4 months.
